Coating Materials for Electronic Applications - 1st Edition

This chapter focuses on functions and requirements of conformal coatings for electronic appliances. Conformational coatings such as polyurethanes, acrylics, epoxies, and silicones have been used to protect printed wiring assemblies from moisture, handling, ionic contaminants, and particulates. With the advent of integrated circuits and multichip modules, a new breed of organic coatings was developed, modified, and purified to render them compatible with the bare chip devices.
