Corrosion control strategy involves two facets, namely corrosion control against production fluids and corrosion control against seawater. The use of chemical inhibitors for corrosion control against production fluids is widespread in the oil industry. But, the reliability of chemical injection valves and mandrels limit the applicability of this option for downhole corrosion control.

Corrosion control in oil and gas pipelines - IJSER

Corrosion Control In Oil And Gas Pipelines. In the United States, the annual cost associated with corrosion damage of structural components is greater than the combined annual cost of natural disasters, including hurricanes, storms, floods, fires and earthquakes (1). Similar findings have been made by studies conducted in the United Kingdom, Germany, and Japan.

Corrosion Control In Oil And Gas Pipelines | Pipeline ...

FeS is insoluble in water and oil and can form a protective layer on steel at low shear stress of fluid, therefore protecting it from further corrosion. As a result, the presence of sulfides in crude oil might decrease the rate of NAC, especially at low temperatures. On the other hand, the reproduced naphthenic acid keeps the corrosion happening.
