Cross-Cultural Research Methods in Psychology provides state-of-the-art knowledge about the methodological problems that need to be addressed if a researcher is to conduct valid and reliable cross-cultural research.

Cross-Cultural Research Methods in Psychology edited by ...

Abstract. Cross-cultural studies are necessary for the complete development of theories in environmental research since no one culture contains all environmental conditions that can affect human behavior. Likewise, no one country contains all possible types of man-made changes of the physical environment, nor all of the man-made adaptations to natural conditions such as climate, noise, air quality, and potential hazards.

Cross-Cultural Research Methods | SpringerLink

The cross-cultural method therefore provides a way of eliminating theories that have no predictive value. Theories that postulate causes, consequences, or relationships are tested in the same way; that is, by looking to see if predicted associations obtain. Sampling. Cross-cultural researchers must decide what societies to examine.

Introducing Cross-Cultural Research. This online course is a brief introduction to the world of ethnography-based cross-cultural research. The course outlines the logic of cross-cultural research and various aspects of the research process from start to finish, including the steps involved in framing a research question, deriving hypotheses from theory, design of measures, coding procedures, sampling, reliability, and the use of statistics to analyze results.

Introducing Cross-Cultural Research | Human Relations Area ...

Approaches to explaining cross-cultural differences and similarities seem to be dependent on research domain; for example, studies involving cross-cultural cognitive research generally regard cultural differences as evidence for a cultural bias in their measurement (Faucheux, 1976).

Cross-Cultural Meta-Analysis (Chapter 12) - Cross-Cultural ...

Cross-cultural studies, sometimes called holocultural studies or comparative studies, is a specialization in anthropology and sister sciences that uses field data from many societies to examine the scope of human behavior and test hypotheses about human behavior and culture. Cross-cultural studies is the third form of cross-cultural comparisons. The first is comparison of case studies, the second is controlled comparison among variants of a common derivation, and the third is comparison within a
