The engine consists of different components, and the weight of the engine depends largely on the type of car. For a small car, you would expect an engine weight of 150kg/330 pounds, while a large V8 diesel can weigh over 350kg/771 pounds. These weights are minus the transmission, which can push the engine weight of the car down to about 600 pounds.

Info. For many car parts, such as engines and cylinder heads, it is important that you specify the correct motor code on your request. The engine code is usually stamped somewhere into the engine block. The first 4 or 5 letters / numbers usually provide enough technical information for a car parts supplier to find the right engine related car part for you.
