The aforementioned historical investigation is described in my book The Dawn of Software Engineering: from Turing to Dijkstra, published by Lonely Scholar in April 2012. My central thesis is that Turing's influence was felt more in programming after his death than in computer building during the 1940s. Moreover, Turing's influence only emerged gradually and often without full comprehension.

In The Dawn of Software Engineering by Edgar Daylight (researching Dijkstra) I stumbled upon the name of an early computer scientist called John Atanasoff. Unfamiliar with this name I decided to look him up. Atanasoff, I found out, was the inventor of the digital computer! And I was not aware of his name (or must have worryingly forgotten).
